Internal control system; public sector entities; managing risks; internal control procedures; internal audit; managing account receivables; costs of public sector entities; fraud; documentation of internal control system; IT-system for internal control.

2.7. ACCOUNTING FOR INTANGIBLE ASSETS IN MEDIA INDUSTRY IN THE CONTEXT OF TRANSITION TO DIGITAL BROADCASTING IN RUSSIAN FEDERATION

O.V. Solovyeva, D.Sc. in Economics, professor, at the Department of accounting, analysis and audit, Faculty of economics;

F.A. Popov, Ph.D. in Economics, Faculty of Economics
Lomonosov Moscow state university

The article describes approach to definition of intangible assets (IA) both from regulatory and from academic point of view. Issues related to accounting for intangible assets in Russian media industry are described. Detailed analysis is provided to the problem non-exclusive program rights recognition under the Russian accounting standards. Article also provides a complex solution to the described issues and forms a proposition to create an industrial standard of accounting for IA in media industry.

3.2. FINANCIAL AND INSTRUMENTAL METHODS TO REDUCE AND COMPENSATE FOR THE RISKS IN THE IMPLEMENTATION OF HIGH-TECH PROJECTS

M.I. Elisarova, Ph.D. in Economics, senior scientific worker;

E.Iu. Khrustalev, D.Sc. in Economics, professor, leading scientific worker;

O.E. Khrustalev, Ph.D. in Economics, senior scientific worker

Central Economics and Mathematics Institute, RAS

The article shows that the effective economic protection of high-tech projects involves managing risks inherent in innovative scientific and technological activities in the direction of reduction and compensation. The main methods of control risky situations offered financial compensation and methods to prevent risks, foremost among which is the rejection of risk, risk reduction, transfer or acceptance of risk. At the stage of long-term plan of the project for the construction of its options developed a model based on the concept of acceptable risk of the project and suggest that the risk factors are additional criteria (along with performance indicators and cost) to be considered in the formation of optimal variants of high technology and high-tech products. The choice of a specific embodiment and its implementation based on the principle of balanced development processes and knowledge-based and high-tech products requires a special financial fund risk. The formation and selection of variants of the plan of the project is carried out in a two-step procedure. In the first stage variants are generated by the classical method for the criterion of cost-effectiveness, risk factors act at the same time as indicators of quality options. In the second stage, the management of risk through the use of a reserve for the most risky projects. The proposed method in an article management contingency plan of the project lies in the fact that options have been turned out at the stage of long-term plan, supplemented by possible deviations from the programmed trajectory in view of the financial risk of the fund.

3.3. METHODS OF MULTI-CRITERIA EXPECTED PROJECTIONS FOR COMPARATIVE ASSESSMENT OF ALTERNATIVES IN ECONOMICS

O.N. Lapaeva, Ph.D. in Economics, associate professor at the department of economic theory and econometrics

«Nizhny Novgorod State Technical University named after R.Y. Alekseev»

Methods of multi-criteria projections for comparative assessing of alternatives in economics, including elements of forecasting, are set forth in the article. The methods envisage initial decision-making separately within each projection. The joint decision shall be made on the basis of both actual and expected data.

3.4. EVALUATION OF MANAGEMENT DECISIONS WITHIN THE FRAMEWORK OF ACCOUNTING AND ANALYTICAL SYSTEM OF THE COST OF PETROCHEMICAL PLANTS

T.B. Leybert, D.Sc. in Economics., professor at the department of «Accounting and audit»;
J.M. Kamalova, undergraduate

Ufa State Petroleum Technological University

The article deals with theoretical and practical aspects of administrative cost analysis petrochemical plants. Within the developed economic-analytical system of the cost of petrochemical plants the technique of marginal cost analysis, taking into account technological features and production competencies.

Keywords

Expenses; economic-analytical system costs; management review; marginal profit; marginal profitability; the effect of operating leverage; the stock of financial strength; technological process; petrochemical industries; calculation.

3.5. THE METHOD OF ANALYSIS OF TRENDS OF THE FINANCIAL STABILITY OF THE COMMERCIAL ORGANIZATION ON THE BASIS OF LINEAR AND NONLINEAR EXTRAPOLATIONS

E.V. Negashev, Ph.D. in Economics, the senior lecturer at the Department of "Economical analysis"

Financial university under the Government of the Russian Federation

The article examines the possibility of building techniques of trend analysis for the financial stability of the commercial organization on the basis of linear and nonlinear extrapolations of the functions approximating the criterion function of financial stability. The proposed method uses a kinematic model to build the approximating function describing the change of the financial stability of the commercial organization with the help of parameters of speed and acceleration of change of the

selected criterion functions. The computational procedure of the constructed methods are demonstrated on a numerical example involving a comparative predictive analysis of various options for changes to the financial stability of the commercial organization using linear and nonlinear estimates of predicted time of approaching crisis financial state of the commercial organization.

3.6. EFFICIENCY OF METHODS AT THE SOLUTION OF A PROBLEM OF OPTIMUM DISTRIBUTION OF A MANPOWER BETWEEN IT PROJECTS OF A PORTFOLIO

A.V. Sotnikova, postgraduate at the Department of applied informatics in economy

Moscow state university of economics, statistics and informatics

In article campaigns and methods to the solution of a problem of effective distribution of a manpower between IT projects of a portfolio for the purpose of minimization of duration of realization of a portfolio are considered. The comparative analysis of the methods used

at distribution of labor resources between IT projects of a portfolio is carried out. The tree of solutions of a choice of a method depending on specifics of the realized portfolio of IT projects is created.

3.7. METHODOLOGICAL ENSURING EFFECTIVE ACTIVITY OF THE ORGANIZATIONS OF RETAIL TRADE ON THE BASIS SYSTEM ECONOMIC DIAGNOSTICS

A.N. Chaplina, D.Sc. in Economics, professor head at the Department of management of trade and economic Institute, Siberian federal university (Krasnoyarsk);

I.N. Trofimova, Ph.D. in Economics, associate professor of Plechanov Russian university of Economics Novosibirsky branch

In article the directions of formation of methodical ensuring effective activity of the organizations of retail trade are allocated; the algorithm of realization of a technique of economic diagnostics is presented; the new term "express diagnostics" and "intra firm economic diagnostics of efficiency of activity of trade organization" is offered, the diagnostic tools are reasonable; results of

approbation of a technique of express diagnostics of efficiency of activity of the organizations of retail trade of Novosibirsk are analysed.

Keywords

Diagnostics; system of diagnostic indicators; indicative matrix; general indicator of dynamics; vector of management of efficiency; multidimensional average.

3.8. THE FEATURES OF THE ANALYSIS OF THE FINANCIAL RESULTS OF AGRICULTURAL ENTERPRISES RECEIVING PUBLIC SUPPORT

V.A. Chernov, D.Sc. in Economics, professor, head at the Department of accounting and audit, Nizhny Novgorod state architectural and construction university;

N.M. Lokteva, chief specialist – the expert of Territorial department of Russian property fund in the Nizhny Novgorod Region

The subject of the research work are the possibilities and ways of development of the enterprises of agriculture, unprofitable receiving public grants and subsidies based on the analysis of the financial results. The purpose of the analysis is the identification of means to

ensure the financial feasibility and financing, improvement of financial results of agricultural activities, the relevance of which has increased dramatically due to the need for import of agricultural products.

The used methods and avenues of analysis, adapted to the peculiarities of subsidized agricultural enterprises. The authors propose a way out subsidized farmers to self-financing.

The analysis showed that in the presence of losses the company has the ability to increase revenue and profit. The decrease in the loss ratio of sales indicates the relative cost savings with tendency achieve profitable operation. Reduce the difference between the actual and break-even sales volume leads to a break-even production.

The operating lever allows to achieve a profitable operation by increasing sales by more than 29,28%.

After evaluation of the EGF, the company has a negative FID, and therefore, will not be worth the financial cost of borrowing. But the increase in sales over the critical level will make the production of capable to pay back the loans. For this purpose, is entirely justified grants. The magnitude of the FIU reflects the existence of property guarantees loan repayment.

Presents the methodology and results of the analysis can be applied for the recovery of many agricultural enterprises. The authors demonstrate how to do this using known methods of economic analysis. The article is written for the practical worker of agricultural Economics, students of economic trends and a wide circle of readers interested in the problems of agriculture.

4. AUDIT

4.1. THE IDENTIFICATION OF RISKS OF FINANCIAL AND ECONOMIC ACTIVITIES OF TOUR OPERATORS IN OUTBOUND TOURISM

A.Sh. Gizyatova, Ph.D. in Economics, associate professor, doctoral candidate, at the Department of audit and control

Finance university under the Government of Russian Federation

The crisis of the tourism industry in the Russian Federation outlined the relevance of the revision of the basic format of state supervision over the activities of tour operators in outbound tourism towards risk-based supervision. Risks of financial and economic activities of tour operators in outbound tourism are industry-specific. Provides two approaches for detecting and identifying risks of tour operators at all stages of business processes.

5.8. FINANCIAL TERMS MULTIDIMENSIONAL NATURE OF SCIENCE AND ITS EVOLUTION

I.V. Ishina, D.Sc. in Economics, professor, head. department «Theory of finance»

Financial university the Government of the Russian Federation

The article discusses the development of a multidimensional understanding of finance as a reflection of each particular historical stage of formation of financial science. The author shows that the interpretation of Finance is still under discussion in the field since the early understanding of just how the public (government) can not finance without the appropriate assumptions transferred to private (corporate finance). In the article the views of foreign scientists in the terminological system of public and corporate finance, analyzed the most common characteristics of formulated author's approach to the allocation of public and corporate finance.

5.9. THE INFLUENCE OF NOMINAL ANCHOR CHOICE ON GDP DYNAMICS

P.S. Kartaev, Ph.D in Economics, associated professorat, the Department of mathematical methods of economic analysis, Economic faculty;

Y.V. Tsareva, candidate for a master's degree, Economic faculty

Lomonosov Moscow state university

This paper examines the longterm effects of nominal anchor choice (monetary, inflation or exchange rate targeting) on output growth dynamics. Using panel data analysis of 189 countries during the 1999-2014 the authors find negative and significant effects of exchange rate targeting on output growth in both emerging and developed economies, while there is no evidence of negative effect on **GDP** growth in developing countries that moved to inflation targeting, inflation targeting may influence positively the **GDP** growth in developed countries.

5.10. FOREIGN EXPERIENCE OF HEALTHCARE FINANCING: GERMANY, USA, THE UNITED KINGDOM

A.M. Kuznetsova, postgraduate at the Department of theory of finance department

Financial university under the Government of the Russian Federation

In the context of health system reform in the Russian Federation, including the system of financing health care institutions, special attention is drawn to the experience of the organization and development of health financing systems of foreign countries. The study financing mechanisms of the health care industry in foreign countries is necessary for the possibility of adapting the experience of countries with the most effective health care system to the Russian reality.

5.13. FINANCING OF SMALL AND MEDIUM FIRMS: FACTORS, CONNECTION, EVALUATION

I.V. Nikitushkina, Ph.D. in Economics, associate professor, Lomonosov Moscow state university;

E.V. Krasilnikova, junior researcher, Central economics and mathematics institute RAS

Peculiarities of financing small and medium-sized firms are investigated in dependence on the several factors: the life cycle organization, the types of finance resources attracted, ownership concentration, etc. The criteria were proposed for the identification of the stages in the life cycle organization and a number of hypotheses concerning the influence factors on the financial decisions were formulated. The key factors of the company's financial strategy were installed as the re-

sults of empirical investigation and of regression analysis, in accordance with specific particular phase of the life cycle organization.

6.2. THE INFLUENCE OF FINANCIAL LIABILITIES DISCLOSURE ON COST OF EQUITY

E.U. Makushina, senior lecturer, at the department of Finance, Faculty of economics;
K.A. Novoselova, student of master program «Strategic corporate finance», Faculty of economics

Higher School of Economics - National Research University

Companies needs investments on different life-cycle stages and have to choose the source of financing. Companies' managers try to reduce costs of raising funds, particularly, the cost of equity. One of the instruments through which they can influence risk and, as a consequence, the cost of equity. Taking investment decisions, investors analyze all the information about company's performance. Over last ten years the interest for financial statements where assets, liabilities, shareholders' equity, incomes and expenses are reported at fair value increased noticeably. Moreover, companies' managers are sure that reporting financial liabilities at fair value can lead to the decrease in the cost of equity. However, the existing researches of the relationship between fair value accounting of financial liabilities and cost of equity demonstrate contradictory results. In this article the regression model was used to investigate this relationship for Russian companies. The results obtained illustrate that the volatility of liabilities

reported at fair value influences the cost of equity. It confirms the hypotheses that changes in fair value of financial liabilities can be used by investors as the indicator of company's credit risk.

6.3. THE ISSUES OF THE EVALUATION OF THE INVESTMENT ATTRACTIVENESS OF OIL AND GAS COMPANIES IN THE CONTEMPORARY TAXATION CONDITIONS

D.O. Khalikova, Ph.D. in Economics, specialist of the Department of financial and economic consulting, LLC "AFK-audit";

M.A. Khalikova, assistant professor of economics and management at the enterprise of the oil and gas industry, Ufa State Petroleum Technological University

In the article the authors analyze the impact of the contemporary taxation conditions for hard-to-recover oil reserves on the selection of investment projects in the investment programs of oil and gas companies, which ultimately affects the investment attractiveness of oil and gas companies.

Using of the differentiated approach to the calculation of the mineral extraction tax (with taking into account many geological factors: the depth and the volume of the reserves, the level of permeability of the reservoir) and export duties in the evaluation of the effectiveness of the extraction of hard-to-recover oil reserves will allow to develop previously unprofitable fields and will increase production, which in turn, will increase the investment attractiveness of oil and gas companies and will reduce the risks of the selection and justification of acceptance of administrative decisions on M&A deals.

7.3. INTEGRATION OF PROJECT PORTFOLIO PROCESSES AND BUDGETING IN PROJECT-ORIENTED COMPANIES

E.V. Kuznetsova, Ph.D. in Economics, associate professor at the Department of business intelligence

National research university Higher school of economics

The paper presents various aspects of project portfolio definition processes and budgeting process integration in project-oriented companies. It is shown that some specific features of such companies' activities do not allow applying conventional and widely spread approaches and methods of investment project management.

Analysis of these specific features is performed. Original approach to definition and implementation control of contract-project portfolios is proposed basing on such analysis. The approach uses the estimation of company budget indicators' dependence on potential portfolio components rates.

The main paper items are illustrated by calculation example.

7.4. TARGET COSTING AS A WAY TO IMPROVE EFFICIENCY ACTIVITY OF THE ENTERPRISES OF THE RUSSIAN CAR INDUSTRY

C.U. Kurilov, Ph.D. in Economics, associate professor of Economics, finance and credit;
A.A. Kurilova, D.Sc. in Economics, associate professor of Economics, finance and credit

Togliatti State University

The Russian market of vehicles shows a negative trend, according to the results of 2013 the volume of car sales fell by 5.5%, and up to 2014 by 7% compared to the same period last year. The greatest decline in

sales experienced domestic brands (-15%). Thus, before the domestic producers should challenge of improving the competitiveness of their products, which is primarily determined by the price of the finished product a car. Practice activities of foreign companies shows that one way to optimize the price of the car is costing tareg system allows the automaker to receive the necessary price for the products.

8. ECONOMICS AND ECONOMIC MATTERS

8.1. EVALUATION CRITERIA OF INTERNATIONAL COMPETITIVENESS OF THE UNIVERSITY

K.U. Burtceva, Ph.D. in Economics, associate professor, doctoral candidate, at the Department of «Audit and control»

Financial university under the Government of the Russian Federation

In the current macroeconomic conditions to strengthen the competitiveness of universities at the international level it becomes a very difficult task. Identification and disclosure of performance to be met by the institution, able to compete in the global educational environment, it is the main objective of this study. The concept of the competitiveness of the university is researched in the article. The sequence of steps of its analysis and the principles that must be considered when assessing and managing the ability to compete are revealed. The criteria of competitiveness of universities with the classification into two groups (hard and soft) are designated. In order to more extensive research universities of countries (UK, Italy, USA, China and Russia) are considered and the comparative analysis of their international competitiveness has done. Seven criteria for assessment competitiveness were allocated. To the "Hard" criteria are attributed tuition fee (per year) and for the analysis of qualitative characteristics were identified such factors as the position of universities in the rankings (TOP 100) and employment. Among the "soft" criteria were selected the next: the rate (per year), financial aid to international students, the levels of higher education and organizations of higher education. It identifies the sources of competitive advantages of the university in the near future and presented a formula to quantify their competitive advantage. Recommendations to improve the international competitiveness of universities to determine their strategic initiatives are offered. Recent events show that the number of transformations in the external environment faced by institutions of higher education, has been steadily increasing, so the strategic initiatives of universities should be to attract sufficient resources, a high concentration of talent and flexible model of management and control. This poses a promising direction for further study of issues of international competitiveness of universities.

8.3. STRATEGIC FRAME- WORK OF SUSTAINABLE DEVELOPMENT OF REGIONAL SOCIO-ECONOMIC SYSTEMS

E.G. Gushina, D.Sc. in Economics, professor, at the Department of economics and management;
A.V. Shokhekh, D.Sc. in Economics, professor, at the Department of economics and management;
E.A. Alimova, senior lecturer at the Department of economics and management

Volgograd branch of "Academy of Labour and Social Relations"

Problem of stability has got its historic background, as people in their business activity had been ruining environment for thousand years, draining natural resources. Growth of planet's population, formation of economics as independent science, development of manufacturing activity to meet the substantive needs of great number of people would surely result ruining of natural landscapes, pollution of environment by industrial wastes. That is why problem of harmonization of economics, human, society and nature become actual. The scientific approach, systematically joining modern economics, human and nature to make the harmonic united and sustainable unity, is known as Concept of sustainable development. Concept of territorial sustainable development assumes development of system of forms and methods for its providing as well as forming the mechanism of their implementation based on certain principles and ways for achieving sustainability. In the article there is investigated the possible order of actions, as well as theoretical bases for providing sustainable regional development. One of the tools for strategic development of regional economics due to the program of social and economic development of the Russian Federation is approval of advantageous competitive environment, specifying the state of outer and inner factors and conditions of enterprising activity, contributing or disturbing to effective implementation of competitive advantages of enterprising structures while providing their sustainable development. In the conditions of economic crises the most important task becomes development and implementation of strategies for sustainable development of enterprising structures of the region as basic mechanism for forming of their competitive potential at providing the sustainable regional development, including that on the basis of regulative basis, development of united methods of defining the grade (index) of sustainability of territories and use of instruments of state and private partnership. For evaluation of forming and implementation of competition potential of enterprising structures the regional authorities need to provide the agreed cooperation of economic, social and institution factors.

8.8. RUSSIAN ECONOMIC EXPANSION IN THE FAR EAST IN THE LATE XIX- EARLY XX CENTURIES

P.I. Struchalin, Ph.D. in Philosophical, associate professor at the Department of economics and management;

I.V. Samoilenko, Ph.D. in Economics, associate professor at the Department of economics and management;

A.M. Boguslavskiy, Ph.D. in Economics, associate professor at the Department of economics and management

Volgograd branch of "Academy of Labour and Social Relations"

Expansion of the Russian empire to the Far East is one of the wastes, the most expensive and ambitious projects in the country's history. While its implementation there were detected weak and strong sides of Russian state system. Attempt to overcome the Great nations for short period of time demanded vast investments, labor and talent of dozens thousand of Russian citizens (from the surveyors and diplomats to engineers and workers). Nevertheless, the first ideas were not implemented successfully. The trade turnover with China remained small comparing with general volume of external trade of Russia. Expenditures for implementation of Far East strategy even in the long-term perspective

could not be compensated by incomes. Investments, spent in Manchuria turned to be unavailable to native industry, having the constant need in capital for development. Loss of southern Manchuria as the result of Russian-Japanese war had finally put an end to primary ideas of economic - dominance of Russia in China became impossible. Nevertheless «turn to the East» can not be considered absurd escapade. It's the most important progressive consequences were strengthening of the positions of Russia on its own Far East and rise of agriculture in Siberia.

8.9. SELECTING AN OPTIMAL STRATEGY FOR CONVERSION OF THE REGIONAL ENERGY SYSTEM TO LOW-CARBON TECHNOLOGIES

E.Iu. Khrustalev, D.Sc. in Economics, professor,
Leading Scientific Worker CEMI RAS;
P.D. Ratner, student of the Finance accounting faculty
Russian Economical University of G.V. Plekhanov,
Krasnodar branch, Krasnodar

This paper researches the possibility of use of the data envelopment analysis methodology to solve the problem of selection of an optimal strategy to convert the regional energy system to more environmentally friendly energy generation technologies. A two-stage approach is suggested, with which each stage consists of applying a base data envelopment analysis model in coefficient, input-oriented form and a radial efficiency measure. The approach is tested by calculating the relative efficiencies of the production activity of energy systems of federal districts. The results obtained are compared with statistical data. The suggested approach is deemed highly informative.

8.10. ANALYSIS OF STATE AND PROSPECTS OF SPA & RESORT COMPLEX IN RUSSIA

M.Y. Sheresheva, D.Sc. in Economics, professor at the Department of applied institutional economics, head of the laboratory for institutional analysis, director of Research center for network economy, faculty of economics;

T.D. Basnina, senior research fellow of the laboratory for institutional analysis

Lomonosov Moscow state university

With the transition to the market economy, the previous management system of the Russian spa & resort complex (SRC) came into conflict with the logic of social and economic reforms. A trend towards the de-

struction of the industry potential became obvious. New industry structure is forming spontaneously, medical and social orientation of sanatorium gives way to economic targets. The need for the reconstruction of spa & resort complex, to make it a part of the tourist complex, requires solving a number of problems, including those not within the agency competence. The paper suggests marketing management approach based on sanatorium services assessment in terms of customer satisfaction. Major attention is paid to the perceived customer value and internal marketing.

9.1. METHOD OF FORMING MATERIAL RESOURCES WITH TECHNOLOGICAL TRAINING IN MULTIPRODUCT MANUFACTURING

E.A. Demchinova, senior lecturer, at the Department of information technology and information security;
G.L. Vinogradova, Ph.D. in Engineerings, professor, at the Department of Information technology and information protection

Kostroma state technological university

This paper proposes an approach to the formation of material resources, taking into account the possibility of using interchangeable materials. A model material management, provided their interchangeability. The methodology of formation of stocks in multiproduct manufacturing, taking into account the features of the proposed approach.

Literature

9.2. INFORMATION FLOWS ROLE IN BANKING LOGISTICS: ISSUES OF STRATEGIC MANAGEMENT AND AUTOMATION

A.V. Merzliak, Ph.D. in Economics, associate professor at the department of Logistics and trade policy chamber

St. Petersburg State University of Economics

This article presents the author's view on the role and place of information flows in bank logistic systems, as well as the ratio of these flows from financial and service ones; identifies a range of present practical goals and theoretical issues that involve the use of advanced logistic tools (Lean, Six Sigma, Kanban, etc.) for intangible flows in accordance with the strategic objectives of the banking sector companies.

9.3. PORTFOLIO OPTIMIZATION TRADING ROBOTS ON DERIVATIVES

A.O. Nedosekin, D.Sc. in Economics, Ph.D. in Technicals, MANEB academician, coordinator of an investing & consulting network IFEL Rus, professor at the Department of Financial management, National mineral resources university "Mining";

Z.I. Abdulaeva, Ph.D. in Economics, assistant professor at the Department of medical informatics and physics, North-Western state medical university named after I.I. Mechnikov

We consider a mathematical model to optimize the portfolio of trading robots that operate with derivatives.

The basis of this model are fuzzy-multiple descriptions. They contain a model of the correlation matrix of assets. The article proposes an approximate method of accounting cross-correlation of assets in the construction of the resulting fuzzy numbers portfolio returns. In the course of portfolio optimization used approximation method gradient optimization. The new optimization method is considered on the settlement example.

11. ECONOMICAL SECURITY

11.1. CORPORATE REPORTING AND ECONOMIC SECURITY: FOREIGN AND DOMESTIC COMPANIES' EXPERIENCE

R.G. Kaspina, D.Sc. in Economics, professor, head of Department of management accounting and controlling; L.A. Molotov, master's degree, master program "Management accounting and controlling"

Institute of management, economics and finance, Kazan (Volga Region) federal university

The article is devoted to the practical aspects of the corporate reporting impact on the system of economic security in comparison of a Russian and a foreign company; describes a company's economic wellbeing dependence from both financial and non-financial factors, most of which are included in the corporate reporting lists; defines indicators of economic security on the basis of corporate reporting.

11.3. SYSTEM OF MONITORING OF A REGIONAL SHADOW PRODUCT

I.J. Falinskiy, Ph.D. in Economics, doctoral candidate of faculty of preparation of scientific and pedagogical-scientific human resources

St. Petersburg university of the Ministry of Internal Affairs of Russia

In article the principles of formation of system of monitoring of a regional shadow product are considered. The interrelation of subjects of illegal bank activity is the cornerstone of the offered model of monitoring. Economical and legal features of economic crimes with participation of the fictitious organizations are defined. Two selection criteria of objects of monitoring are designated. Model elements are described, the technique of definition of the main economic indicators is stated. In a tabular form the structure of model of monitoring is presented.
